

Windshield Care Instructions

Periodic cleaning of your windshield using the proper procedures and chemicals is highly recommended to prolong the life of the product. For general cleaning, it is recommended that the following instructions be followed. These procedures can also be followed for the interior, untreated surface of the polycarbonate windshield.

1. Rinse off windshield with lukewarm water.
2. Wash with mild soap and lukewarm water.
3. Use soft cloth or sponge to gently wash using an up and down motion.
4. Rinse soft cloth or sponge and make sure to change water often.
5. Rinse and dry off with a soft cloth to prevent spotting.

*****NOTES:****

- **NEVER use Windex or other harsh cleaning chemicals**
- **DO NOT use paper towels**
- **DO NOT scrub or use items such as brushes or squeegees**
