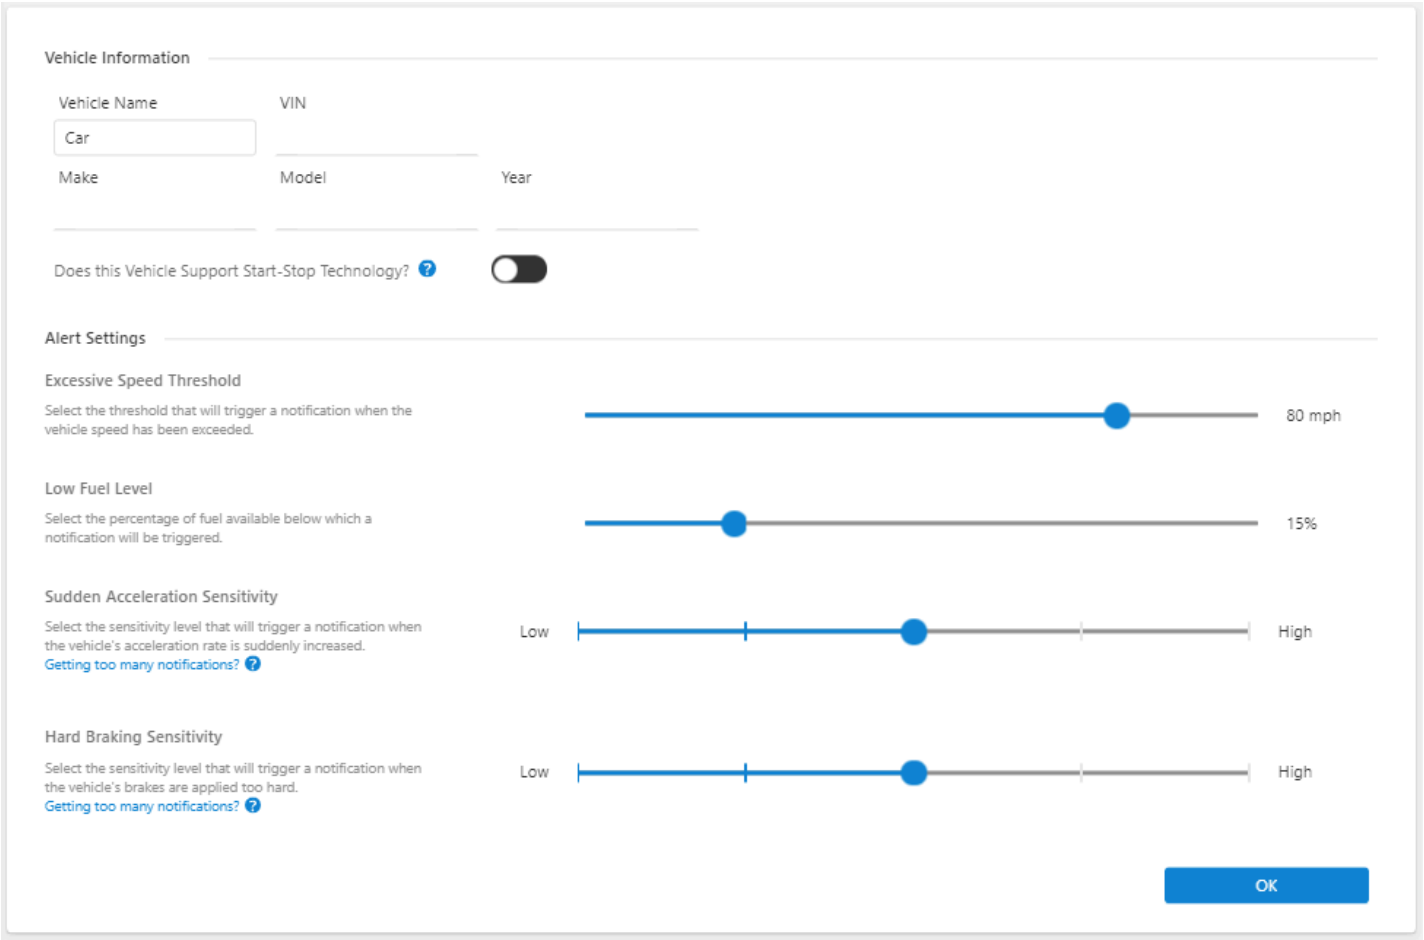
Configure Connected Car Settings

Connected Car Settings can be configured using the Customer Website or app.

To configure Connected Car Settings using the Customer Website:

1. Log into the Customer Website.
2. Click **Settings**.
3. Click **Manage Devices**.
4. Click ⋯ next to the vehicle to configure.
5. Click **Device Settings**.
6. Configure *Vehicle Name* and *Alert Settings* as desired.
7. Click **OK** to save changes.

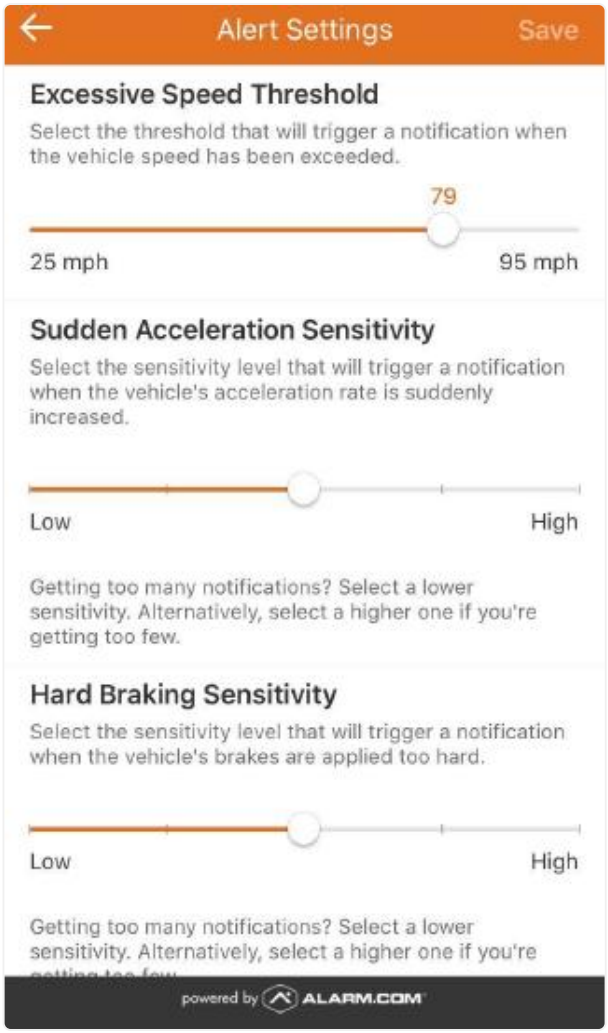
Note: Some settings may not take effect until the next time the Car Connector communicates with Alarm.com servers.



To configure Connected Car Settings using the Customer app:

1. Log into the Customer app.
2. Tap ≡.
3. Tap **Cars**.
4. Tap ⚙.
5. Tap **Alert Settings**.
6. Configure *Alert Settings* as desired.
7. Tap **Save**.

Note: Some settings may not take effect until the next time the Car Connector communicates with Alarm.com servers.



Alert Settings
Save
Excessive Speed Threshold
Select the threshold that will trigger a notification when the vehicle speed has been exceeded.
79
25 mph
95 mph
Sudden Acceleration Sensitivity
Select the sensitivity level that will trigger a notification when the vehicle's acceleration rate is suddenly increased.
Low
High
Getting too many notifications? Select a lower sensitivity. Alternatively, select a higher one if you're getting too few.
Hard Braking Sensitivity
Select the sensitivity level that will trigger a notification when the vehicle's brakes are applied too hard.
Low
High
Getting too many notifications? Select a lower sensitivity. Alternatively, select a higher one if you're
